Github: github.com/em-cee-ayy

SUMMARY

Product engineer and AI builder with a foundation in psychology, UX, and full-stack development – specializing in translating complex data systems into scalable product strategy. Experienced working with APIs, behavioral datasets, and cross-functional teams to drive measurable outcomes. Natural bridge between engineering, data science, and product leadership, with a track record of diagnosing systemic platform issues and shaping roadmap direction. Background in digital marketing strategy and consumer behavior, with deep interest in privacy-compliant, data-driven targeting systems.

EDUCATION

Western Conn. State University

B.S. Psychology, Graduated May 2017

Florida Atlantic University

UX / UI Design Certification, Completed 2022

Southern New Hampshire University

M.S. Digital Marketing, Expected 2028

SKILLS

- **AI & Technical:** SQL, JavaScript, HTML/CSS, API integrations, Python, debugging, data analysis, React, Tailwind, Firebase, behavioral data analysis, AI/ML product integration, data flows, behavioral datasets, system analysis
- **Product Management:** Roadmapping, user research, stakeholder collaboration, Agile/Scrum, metrics-driven decisions, consumer app lifecycle, research-to-feature translation, privacy-first product strategy, data partnership evaluation
- **UX & Human-Centered Design:** Usability testing, prototyping, wireframing, information architecture
- **Tools:** Figma, IDE, Confluence, GitHub, Zendesk, Salesforce, Trello, Notion, Adobe Creative Cloud
- **Data Systems & Infrastructure:** API integrations and debugging, data pipeline troubleshooting, platform reliability analysis, large dataset analysis and behavioral signal interpretation, data-informed product decision making, privacy-compliant data frameworks, audience segmentation concepts, identity resolution patterns

EXPERIENCE

Senior Product Engineer

SOCi | 2022 – Present

- Led cross-functional collaboration between Product, Engineering, and Design to identify platform gaps and shape product strategy
- Investigated complex platform issues across APIs, databases, and application layers using SQL, JavaScript, and backend debugging tools
- Analyzed large behavioral datasets, including user interaction signals, API event logs, and support trend data, to identify systemic product gaps, contributing to a 55% reduction in resolution time and directly influencing roadmap prioritization
- Acted as a technical liaison between Engineering and Product leadership, translating system-level insights into product requirements and architectural recommendations
- Partnered with Product Managers to surface recurring platform issues and prioritize improvements to reliability, performance, and user experience
- Mentored and onboarded new hires, establishing technical workflows and product collaboration standards across a cross-functional team

Account Manager

eLocal | 2021 – 2022

- Analyzed client performance data to improve retention and outcomes

Customer Success Manager

Charity Footprints | 2020 – 2021

- Managed 100+ client accounts and led onboarding demos to increase platform adoption.

PROJECTS

Flux: AI-Powered Behavioral Productivity System

(Independent Product, 2025 – Present)

- Built Flux, an AI-powered application integrating behavioral signal processing, user state modeling, and real-time API data flows – demonstrating ability to architect complex data systems that track, resolve, and activate user context over time
- Architected the system using React, Firebase, and OpenAI APIs to translate user inputs and contextual signals into dynamic AI-generated workflows
- Conducted user research and behavioral data analysis to validate product hypotheses and inform feature design
